

BEVOAC ENTERPRISE SECURITY AUDIT REPORT

Generated on 2026-05-14

20/100

Critical exposure

Immediate remediation required

The scan requires action. Global risk level is Critical exposure. Main risk areas: Databases, Key Vault, Logs, Storage, Tags, Virtual Machines. Top risks detected: Virtual Machines: Management ports (RDP/SSH) are exposed to the Internet; Databases: Databases have Public Network Access enabled; Key Vault: Key Vaults are publicly accessible. Recommended next step: remediate critical and high findings, then relaunch a Bevoac scan to confirm closure.

Audit context

Scan ID	b2a4e17c-78af-4393-8dc3-f24833838737
Tenant Bevoac	9123efda-6e57-461d-bdf0-1ab2d6d9aa49
Cloud provider	azure
Scan profile	infra
Completed at	2026-05-14T12:06:08.369Z
Microsoft tenant	9343d0b2-a36b-409d-b97a-54fa40eff7c6
Subscriptions	ef2de274-452b-4fe9-b81c-2f4136473abf
Resources counted	76 / 500 (15.2%)
Global score	20/100 - Critical exposure
Decision	Immediate remediation required

Report scope and evidence model

- This report is finding-oriented. It does not list every discovered Azure resource individually.
- It lists each executed control, its result, remediation guidance and affected resources where a finding exists.
- For high-volume findings, the PDF displays a capped evidence sample. The complete scan result remains available through the scan API JSON response.
- Infrastructure scope is derived from the authenticated Bevoac tenant and validated Azure scopes. Web scope is derived from registered tenant web targets.

1. Executive Summary

1.1 Severity distribution

Critical	High	Medium	Low	Info	Unknown
3	6	6	1	13	0

1.2 Status distribution

Failed	Warning	Passed	Info	Unknown
16	0	13	0	0

1.3 Module summary

Module	Execution	Posture	Checks	Failed	Warning	Passed	Resources
App Services	SUCCESS	PASS	2	0	0	2	N/A
Databases	SUCCESS	FAIL	2	2	0	0	N/A
Entra B2B	SUCCESS	PASS	1	0	0	1	N/A
FinOps	SUCCESS	PASS	1	0	0	1	N/A
Governance	SUCCESS	PASS	2	0	0	2	N/A
Key Vault	SUCCESS	FAIL	3	2	0	1	1
Logs	SUCCESS	FAIL	2	1	0	1	N/A
NSG	SUCCESS	PASS	2	0	0	2	2
Storage	SUCCESS	FAIL	7	6	0	1	3
Tags	SUCCESS	FAIL	2	2	0	0	N/A
Virtual Machines	SUCCESS	FAIL	5	3	0	2	6

1.4 Top risks

#	Severity	Module	Risk	Affected	Recommended action
1	CRITICAL	Virtual Machines	Management ports (RDP/SSH) are exposed to the Internet	2	Remove public IPs from VMs. Use Azure Bastion or Just-In-Time (JIT) VM access. Restrict NSG inbound rules to specific trusted corporate IP ranges.
2	CRITICAL	Databases	Databases have Public Network Access enabled	1	Disable Public Network Access and configure Azure Private Link (Private Endpoints) to ensure the database is only accessible from trusted virtual networks.
3	CRITICAL	Key Vault	Key Vaults are publicly accessible	1	Disable public network access or configure Network ACLs to 'Deny' by default. Use Azure Private Link (Private Endpoints) for secure access.
4	HIGH	Tags	Resources missing mandatory tags (Environment, Owner)	42	Enforce a mandatory tagging taxonomy across the tenant using Azure Policy. Standardize tag keys to avoid case-sensitivity issues.
5	HIGH	Storage	Storage accounts allow public network access from unrestricted sources	3	Restrict network access to selected virtual networks and IP ranges, and prefer private endpoints for sensitive or production storage workloads.

1.5 Remediation priorities

Priority	Severity	Control	Action	Recommended SLA
P1	CRITICAL	CHECK-AZ-VMS-001	Remove public IPs from VMs. Use Azure Bastion or Just-In-Time (JIT) VM access. Restrict NSG inbound rules to specific trusted corporate IP ranges.	24-72h
P2	CRITICAL	CHECK-AZ-DB-001	Disable Public Network Access and configure Azure Private Link (Private Endpoints) to ensure the database is only accessible from trusted virtual networks.	24-72h
P3	CRITICAL	CHECK-AZ-KV-001	Disable public network access or configure Network ACLs to 'Deny' by default. Use Azure Private Link (Private Endpoints) for secure access.	24-72h
P3	HIGH	CHECK-TAGS-002	Enforce a mandatory tagging taxonomy across the tenant using Azure Policy. Standardize tag keys to avoid case-sensitivity issues.	7 days
P3	HIGH	CHECK-AZ-STG-001	Restrict network access to selected virtual networks and IP ranges, and prefer private endpoints for sensitive or production storage workloads.	7 days

2. Control Matrix

Severity	Status	Module	Check ID	Finding	Affected
CRITICAL	FAILED	Virtual Machines	CHECK-AZ-VMS-001	Management ports (RDP/SSH) are exposed to the Internet	2
CRITICAL	FAILED	Databases	CHECK-AZ-DB-001	Databases have Public Network Access enabled	1
CRITICAL	FAILED	Key Vault	CHECK-AZ-KV-001	Key Vaults are publicly accessible	1
HIGH	FAILED	Tags	CHECK-TAGS-002	Resources missing mandatory tags (Environment, Owner)	42
HIGH	FAILED	Storage	CHECK-AZ-STG-001	Storage accounts allow public network access from unrestricted sources	3
HIGH	FAILED	Storage	CHECK-AZ-STG-002	Secure transfer is not enforced on some storage accounts	2
HIGH	FAILED	Databases	CHECK-AZ-DB-002	Databases allow access from any Azure service	1
HIGH	FAILED	Key Vault	CHECK-AZ-KV-002	Purge Protection is disabled on Key Vaults	1
HIGH	FAILED	Storage	CHECK-AZ-STG-004	Blob public access is enabled on some storage accounts	1
MEDIUM	FAILED	Tags	CHECK-TAGS-001	Resources with no tags detected	34
MEDIUM	FAILED	Virtual Machines	CHECK-AZ-VMS-003	Virtual Machines are not utilizing Trusted Launch	4
MEDIUM	FAILED	Storage	CHECK-AZ-STG-003	Publicly reachable storage accounts have no private endpoints configured	3
MEDIUM	FAILED	Storage	CHECK-AZ-STG-005	Shared Key authorization remains enabled on some storage accounts	2
MEDIUM	FAILED	Logs	CHECK-AZ-LOG-002	Log Analytics retention is less than 90 days	1
MEDIUM	FAILED	Storage	CHECK-AZ-STG-006	Some storage accounts allow a minimum TLS version below 1.2	1
LOW	FAILED	Virtual Machines	CHECK-AZ-VMS-004	Virtual Machines are not using Managed Identities	6
INFO	PASSED	App Services	CHECK-AZ-APP-001	App Services enforce HTTPS	0
INFO	PASSED	App Services	CHECK-AZ-APP-003	Basic Authentication is disabled	0
INFO	PASSED	Entra B2B	CHECK-ENTRA-B2B-000	B2B Guest identity posture is healthy	0
INFO	PASSED	FinOps	CHECK-AZ-FIN-000	No obvious cloud waste detected	0
INFO	PASSED	Governance	CHECK-AZ-GOV-001	Microsoft Defender for Cloud is enabled	0
INFO	PASSED	Governance	CHECK-AZ-GOV-002	Security Benchmark Policy is assigned	0
INFO	PASSED	Key Vault	CHECK-AZ-KV-003	Soft Delete is enabled	0
INFO	PASSED	Logs	CHECK-AZ-LOG-001	Log Analytics Workspaces are deployed	0
INFO	PASSED	NSG	CHECK-AZ-NSG-001	Management ports are securely restricted	0
INFO	PASSED	NSG	CHECK-AZ-NSG-002	Database ports are not publicly exposed via NSG	0
INFO	PASSED	Storage	CHECK-AZ-STG-007	No analyzed storage accounts were found with local users enabled	0
INFO	PASSED	Virtual Machines	CHECK-AZ-VMS-002	Virtual Machine disks utilize encryption	0
INFO	PASSED	Virtual Machines	CHECK-AZ-VMS-005	Linux password authentication is disabled	0

3. Technical Evidence Appendix

This appendix includes each control result, affected resource counts, resource samples, observed technical properties and remediation guidance. Resource samples are capped to keep the PDF readable; complete JSON evidence remains available through the scan API.

1. CHECK-AZ-VMS-001 - Management ports (RDP/SSH) are exposed to the Internet

Check ID	CHECK-AZ-VMS-001
Module	Virtual Machines
Severity	CRITICAL
Status	FAILED
Resource type	Microsoft.Compute/virtualMachines
Affected	2

Management ports (RDP/SSH) are exposed to the Internet

Description

One or more virtual machines have network interfaces with public IPs and Allow rules for ports 22 or 3389 from 'Any' source. This is a severe vector for brute-force and ransomware attacks.

Recommended action

Remove public IPs from VMs. Use Azure Bastion or Just-In-Time (JIT) VM access. Restrict NSG inbound rules to specific trusted corporate IP ranges.

Affected resources and observed properties

Resource 1: sage01-prod-fr

Name	sage01-prod-fr
Resource group	RG-VMS-PROD-FR
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.Compute/virtualMachines

Resource ID
/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/RG-VMS-PROD-FR/providers/Microsoft.Compute/virtualMachines/sage01-prod-fr

Observed properties

- osType: Windows
- exposedPorts: Direct Public IP without NIC NSG

Resource 2: sql01-prod-fr

Name	sql01-prod-fr
Resource group	RG-VMS-PROD-FR
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.Compute/virtualMachines

Resource ID
/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/RG-VMS-PROD-FR/providers/Microsoft.Compute/virtualMachines/sql01-prod-fr

Observed properties

- osType: Windows
- exposedPorts: Direct Public IP without NIC NSG

2. CHECK-AZ-DB-001 - Databases have Public Network Access enabled

Check ID	CHECK-AZ-DB-001
Module	Databases

Severity	CRITICAL
Status	FAILED
Resource type	Microsoft.Sql/servers
Affected	1

Databases have Public Network Access enabled

Description
Public Network Access is enabled for one or more database servers. This exposes the database endpoint to the Internet, increasing the risk of brute-force attacks and unauthorized access.

Recommended action
Disable Public Network Access and configure Azure Private Link (Private Endpoints) to ensure the database is only accessible from trusted virtual networks.

Affected resources and observed properties

Resource 1: sqldb01-prod-fr	
Name	sqldb01-prod-fr
Resource group	rg-database-prod-fr
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.Sql/servers
Resource ID	/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/rg-database-prod-fr/providers/Microsoft.Sql/servers/sqldb01-prod-fr
Observed properties	engine: Azure SQL

3. CHECK-AZ-KV-001 - Key Vaults are publicly accessible

Check ID	CHECK-AZ-KV-001
Module	Key Vault
Severity	CRITICAL
Status	FAILED
Resource type	Microsoft.KeyVault/vaults
Affected	1

Key Vaults are publicly accessible

Description
One or more Key Vaults allow public network access without a default deny network ACL. This exposes sensitive cryptographic keys and secrets to unauthorized network access and brute-force attempts.

Recommended action
Disable public network access or configure Network ACLs to 'Deny' by default. Use Azure Private Link (Private Endpoints) for secure access.

Affected resources and observed properties

Resource 1: portdesigns-vault-prod	
Name	portdesigns-vault-prod
Resource group	rg-vault-prod-fr
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.KeyVault/vaults
Resource ID	/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/rg-vault-prod-fr/providers/Microsoft.KeyVault/vaults/portdesigns-vault-prod

Observed properties

- publicNetworkAccess: Enabled
- networkAcIsDefaultAction: None
- networkAcIsBypass: None
- privateEndpointsCount: 0
- enablePurgeProtection: false
- enableSoftDelete: true
- softDeleteRetentionInDays: 90
- enableRbacAuthorization: true
- skuName: Standard
- approvedPrivateEndpointsCount: 0

4. CHECK-TAGS-002 - Resources missing mandatory tags (Environment, Owner)

Check ID	CHECK-TAGS-002
Module	Tags
Severity	HIGH
Status	FAILED
Resource type	Azure Resources
Affected	42

Resources missing mandatory tags (Environment, Owner)

Description

Critical organizational tags ('Environment' and 'Owner') are missing on some resources. Without these, incident response and FinOps processes are severely impacted.

Recommended action

Enforce a mandatory tagging taxonomy across the tenant using Azure Policy. Standardize tag keys to avoid case-sensitivity issues.

Affected resources and observed properties

Resource 1: portdesigns.com

Name	portdesigns.com
Resource group	rg-aadds-prod-fr
Location	
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.AAD/DomainServices

Resource ID

/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/rg-aadds-prod-fr/providers/Microsoft.AAD/DomainServices/portdesigns.com

Observed properties

- missingTags: environment, owner

Resource 2: automation-account-prod-fr

- Observed properties**
- missingTags: environment, owner

Showing first 10 affected resources out of 42. Full JSON evidence remains available through the scan API result.

5. CHECK-AZ-STG-001 - Storage accounts allow public network access from unrestricted sources

Check ID	CHECK-AZ-STG-001
Module	Storage
Severity	HIGH
Status	FAILED
Resource type	Microsoft.Storage/storageAccounts
Affected	3

Storage accounts allow public network access from unrestricted sources

Description
One or more storage accounts are configured with public network access enabled and a permissive default firewall action, increasing the attack surface and the risk of unauthorized access or data exposure.

Recommended action
Restrict network access to selected virtual networks and IP ranges, and prefer private endpoints for sensitive or production storage workloads.

Affected resources and observed properties

Resource 1: config1716299137606

Name	config1716299137606
Resource group	rg-storage-prod-fr
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.Storage/storageAccounts

Resource ID
/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/rg-storage-prod-fr/providers/Microsoft.Storage/storageAccounts/config1716299137606

Observed properties

- publicNetworkAccess: Enabled
- defaultAction: Allow
- bypass: AzureServices
- minimumTlsVersion: TLS1_0
- enableHttpsTrafficOnly: false
- allowBlobPublicAccess: false
- privateEndpointsCount: 0

/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/rg-storage-prod-fr/providers/Microsoft.Storage/storageAccounts/portdesignsstorage

Observed properties

- publicNetworkAccess: Enabled
- defaultAction: Allow
- bypass: Logging, Metrics, AzureServices
- minimumTlsVersion: TLS1_2
- enableHttpsTrafficOnly: true
- allowBlobPublicAccess: false
- allowSharedKeyAccess: true
- privateEndpointsCount: 0

6. CHECK-AZ-STG-002 - Secure transfer is not enforced on some storage accounts

Check ID	CHECK-AZ-STG-002
Module	Storage

Severity	HIGH
Status	FAILED
Resource type	Microsoft.Storage/storageAccounts
Affected	2

Secure transfer is not enforced on some storage accounts

Description
Some storage accounts do not enforce HTTPS-only access, which may allow clients to use unencrypted HTTP connections.

Recommended action
Enable 'secure transfer required' on all storage accounts to enforce HTTPS and reduce the risk of plaintext data transit.

Affected resources and observed properties

Resource 1: config1716299137606

Name	config1716299137606
Resource group	rg-storage-prod-fr
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.Storage/storageAccounts

Resource ID
/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/rg-storage-prod-fr/providers/Microsoft.Storage/storageAccounts/config1716299137606

- Observed properties**
- publicNetworkAccess: Enabled
 - defaultAction: Allow
 - bypass: AzureServices
 - minimumTlsVersion: TLS1_0
 - enableHttpsTrafficOnly: false
 - allowBlobPublicAccess: false
 - privateEndpointsCount: 0

Resource 2: portdesignspublicstorage

Name	portdesignspublicstorage
Resource group	rg-storage-prod-fr
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.Storage/storageAccounts

Resource ID
/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/rg-storage-prod-fr/providers/Microsoft.Storage/storageAccounts/portdesignspublicstorage

- Observed properties**
- publicNetworkAccess: Enabled
 - defaultAction: Allow
 - bypass: AzureServices
 - minimumTlsVersion: TLS1_2
 - enableHttpsTrafficOnly: false
 - allowBlobPublicAccess: true
 - allowSharedKeyAccess: true
 - privateEndpointsCount: 0

7. CHECK-AZ-DB-002 - Databases allow access from any Azure service

Check ID	CHECK-AZ-DB-002
Module	Databases
Severity	HIGH
Status	FAILED

Resource type	Microsoft.Sql/servers
Affected	1

Databases allow access from any Azure service

Description
A firewall rule (0.0.0.0 to 0.0.0.0) is configured to 'Allow access to Azure services'. This setting permits ANY resource deployed in Azure—including those owned by attackers—to attempt connections to your database.

Recommended action
Remove the 'Allow Azure Services' firewall rule. Use VNet integration or Private Endpoints to grant access only to your specific Azure resources.

Affected resources and observed properties

Resource 1: sqldb01-prod-fr

Name	sqldb01-prod-fr
Resource group	rg-database-prod-fr
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.Sql/servers

Resource ID
/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/rg-database-prod-fr/providers/Microsoft.Sql/servers/sqldb01-prod-fr

Observed properties

- engine: Azure SQL

8. CHECK-AZ-KV-002 - Purge Protection is disabled on Key Vaults

Check ID	CHECK-AZ-KV-002
Module	Key Vault
Severity	HIGH
Status	FAILED
Resource type	Microsoft.KeyVault/vaults
Affected	1

Purge Protection is disabled on Key Vaults

Description
Purge Protection is not enabled. If a vault or its secrets are deleted, an attacker or compromised admin account could permanently purge the data before the retention period expires, leading to irrecoverable data loss.

Recommended action
Enable Purge Protection on the Key Vault. Note: once enabled, Purge Protection cannot be disabled and data must complete its retention period.

Affected resources and observed properties

Resource 1: portdesigns-vault-prod

Name	portdesigns-vault-prod
Resource group	rg-vault-prod-fr
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.KeyVault/vaults

Resource ID
/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/rg-vault-prod-fr/providers/Microsoft.KeyVault/vaults/portdesigns-vault-prod

Observed properties

- publicNetworkAccess: Enabled
- networkAclsDefaultAction: None
- networkAclsBypass: None

- privateEndpointsCount: 0
- enablePurgeProtection: false
- enableSoftDelete: true
- softDeleteRetentionInDays: 90
- enableRbacAuthorization: true
- skuName: Standard
- approvedPrivateEndpointsCount: 0

9. CHECK-AZ-STG-004 - Blob public access is enabled on some storage accounts

Check ID	CHECK-AZ-STG-004
Module	Storage
Severity	HIGH
Status	FAILED
Resource type	Microsoft.Storage/storageAccounts
Affected	1

Blob public access is enabled on some storage accounts

Description
Some storage accounts allow public blob access at the account level, which can enable accidental anonymous exposure of containers or objects.

Recommended action
Disable blob public access at the storage account level and prefer authenticated access through Entra ID, SAS, or private connectivity.

Affected resources and observed properties

Resource 1: portdesignspublicstorage

Name	portdesignspublicstorage
Resource group	rg-storage-prod-fr
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf
Resource type	Microsoft.Storage/storageAccounts

Resource ID
/subscriptions/ef2de274-452b-4fe9-b81c-2f4136473abf/resourceGroups/rg-storage-prod-fr/providers/Microsoft.Storage/storageAccounts/portdesignspublicstorage

- Observed properties**
- publicNetworkAccess: Enabled
 - defaultAction: Allow
 - bypass: AzureServices
 - minimumTlsVersion: TLS1_2
 - enableHttpsTrafficOnly: false
 - allowBlobPublicAccess: true
 - allowSharedKeyAccess: true
 - privateEndpointsCount: 0

10. CHECK-TAGS-001 - Resources with no tags detected

Check ID	CHECK-TAGS-001
Module	Tags
Severity	MEDIUM
Status	FAILED
Resource type	Azure Resources
Affected	34

Resources with no tags detected

Description

Several resources have absolutely no tags assigned. This prevents proper cost allocation (Chargeback/Showback) and reduces operational visibility.

Recommended action

Implement Azure Policies with 'Append' or 'Modify' effects to automatically inherit tags from the Resource Group, or 'Deny' resource creation if tags are missing.

Affected resources and observed properties

11. CHECK-AZ-VMS-003 - Virtual Machines are not utilizing Trusted Launch

Check ID	CHECK-AZ-VMS-003
Module	Virtual Machines
Severity	MEDIUM
Status	FAILED
Resource type	Microsoft.Compute/virtualMachines
Affected	4

Virtual Machines are not utilizing Trusted Launch

Description
Some VMs are not configured with Trusted Launch (Secure Boot and vTPM). This leaves them vulnerable to bootkits, rootkits, and kernel-level malware.

Recommended action
Redeploy or configure VMs to use Trusted Launch architecture to ensure boot chain integrity.

Affected resources and observed properties

12. CHECK-AZ-STG-003 - Publicly reachable storage accounts have no private endpoints configured

Check ID	CHECK-AZ-STG-003
Module	Storage
Severity	MEDIUM
Status	FAILED
Resource type	Microsoft.Storage/storageAccounts
Affected	3

Publicly reachable storage accounts have no private endpoints configured

Description

Some storage accounts remain publicly reachable and do not use private endpoints, which may be inconsistent with production-grade isolation requirements.

Recommended action

Use private endpoints for critical storage accounts and reduce public exposure whenever private connectivity is available.

Affected resources and observed properties

Resource 1: config1716299137606

Name	config1716299137606
Resource group	rg-storage-prod-fr

- bypass: Logging, Metrics, AzureServices
- minimumTlsVersion: TLS1_2
- enableHttpsTrafficOnly: true
- allowBlobPublicAccess: false
- allowSharedKeyAccess: true
- privateEndpointsCount: 0

13. CHECK-AZ-STG-005 - Shared Key authorization remains enabled on some storage accounts

Check ID	CHECK-AZ-STG-005
Module	Storage
Severity	MEDIUM
Status	FAILED
Resource type	Microsoft.Storage/storageAccounts
Affected	2

Shared Key authorization remains enabled on some storage accounts

Description

Some storage accounts still allow Shared Key access, which may bypass stronger identity-based access patterns and complicate access governance.

Recommended action

Where possible, disable Shared Key authorization and prefer Microsoft Entra ID-based access controls and scoped delegation.

Affected resources and observed properties

Resource 1: portdesignspublicstorage

Name	portdesignspublicstorage
Resource group	rg-storage-prod-fr
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf

14. CHECK-AZ-LOG-002 - Log Analytics retention is less than 90 days

Check ID	CHECK-AZ-LOG-002
Module	Logs
Severity	MEDIUM
Status	FAILED
Resource type	Microsoft.OperationalInsights/workspaces
Affected	1

Log Analytics retention is less than 90 days

Description

Workspaces were found with a log retention period of less than 90 days. Advanced persistent threats (APTs) often remain undetected for months. Short retention policies destroy critical forensic evidence.

Recommended action

Increase the workspace data retention to at least 90 days to meet minimum cybersecurity compliance standards.

Affected resources and observed properties

Resource 1: LogAnalyticsWorkspace

Name	LogAnalyticsWorkspace
Resource group	rg-logs-prod-fr
Location	francecentral

- Observed properties
- retentionDays: 30

15. CHECK-AZ-STG-006 - Some storage accounts allow a minimum TLS version below 1.2

Check ID	CHECK-AZ-STG-006
Module	Storage
Severity	MEDIUM
Status	FAILED
Resource type	Microsoft.Storage/storageAccounts
Affected	1

Some storage accounts allow a minimum TLS version below 1.2

Description
One or more storage accounts are configured with an outdated minimum TLS version, which may allow weaker transport security negotiation.

Recommended action
Set the minimum TLS version to TLS1_2 or higher for all storage accounts.

Affected resources and observed properties

Resource 1: config1716299137606

Name	config1716299137606
Resource group	rg-storage-prod-fr
Location	francecentral
Subscription	ef2de274-452b-4fe9-b81c-2f4136473abf

- Observed properties
- publicNetworkAccess: Enabled
 - defaultAction: Allow
 - bypass: AzureServices
 - minimumTlsVersion: TLS1_0
 - enableHttpsTrafficOnly: false
 - allowBlobPublicAccess: false
 - privateEndpointsCount: 0

16. CHECK-AZ-VMS-004 - Virtual Machines are not using Managed Identities

Check ID	CHECK-AZ-VMS-004
Module	Virtual Machines

Severity	LOW
Status	FAILED
Resource type	Microsoft.Compute/virtualMachines
Affected	6

Virtual Machines are not using Managed Identities

Description

Some VMs do not have a System-Assigned or User-Assigned Managed Identity. Developers might resort to hardcoding credentials to access Azure APIs from within these VMs.

Recommended action

Assign Managed Identities to VMs that require access to Azure resources (Key Vault, Storage) to eliminate credential management overhead.

Affected resources and observed properties

17. CHECK-AZ-APP-001 - App Services enforce HTTPS

Check ID	CHECK-AZ-APP-001
Module	App Services
Severity	INFO
Status	PASSED
Resource type	Microsoft.Web/sites
Affected	0

App Services enforce HTTPS

Description
All analyzed App Services force traffic over encrypted HTTPS connections.

Recommended action
Maintain 'HTTPS Only' enabled for all new deployments.

Affected resources and observed properties
No affected resource detected for this control.

18. CHECK-AZ-APP-003 - Basic Authentication is disabled

Check ID	CHECK-AZ-APP-003
Module	App Services
Severity	INFO
Status	PASSED
Resource type	Microsoft.Web/sites
Affected	0

Basic Authentication is disabled

Description
App Services are secured against legacy Basic Authentication, relying on Entra ID.

Recommended action
Continue to enforce modern authentication.

Affected resources and observed properties
No affected resource detected for this control.

19. CHECK-ENTRA-B2B-000 - B2B Guest identity posture is healthy

Check ID	CHECK-ENTRA-B2B-000
Module	Entra B2B
Severity	INFO
Status	PASSED
Resource type	Multiple
Affected	0

B2B Guest identity posture is healthy

Description
No inactive guest accounts, unmanaged guest admins, or guests lacking MFA were detected.

Recommended action
Continue to enforce Conditional Access for external identities and conduct regular access reviews.

Affected resources and observed properties
No affected resource detected for this control.

20. CHECK-AZ-FIN-000 - No obvious cloud waste detected

Check ID	CHECK-AZ-FIN-000
Module	FinOps
Severity	INFO
Status	PASSED
Resource type	Multiple
Affected	0

No obvious cloud waste detected

Description

No orphaned disks, unattached IPs, empty plans, or improperly stopped VMs were found.

Recommended action

Continue monitoring your cloud spend. Ensure Auto-Shutdown schedules are configured for Dev/Test environments.

Affected resources and observed properties

No affected resource detected for this control.

21. CHECK-AZ-GOV-001 - Microsoft Defender for Cloud is enabled

Check ID	CHECK-AZ-GOV-001
Module	Governance
Severity	INFO
Status	PASSED
Resource type	Microsoft.Security/pricings
Affected	0

Microsoft Defender for Cloud is enabled

Description

At least one advanced Microsoft Defender for Cloud plan is enabled on the analyzed subscriptions.

Recommended action

Regularly review the Defender secure score and address the highest priority recommendations.

Affected resources and observed properties

No affected resource detected for this control.

22. CHECK-AZ-GOV-002 - Security Benchmark Policy is assigned

Check ID	CHECK-AZ-GOV-002
Module	Governance
Severity	INFO
Status	PASSED
Resource type	Microsoft.Authorization/policyAssignments
Affected	0

Security Benchmark Policy is assigned

Description

A major security benchmark or policy initiative is actively assigned to the subscription.

Recommended action

Review the compliance state of this policy assignment in the Azure Portal to ensure resources are not drifting from standard.

Affected resources and observed properties

No affected resource detected for this control.

23. CHECK-AZ-KV-003 - Soft Delete is enabled

Check ID	CHECK-AZ-KV-003
Module	Key Vault

Severity	INFO
Status	PASSED
Resource type	Microsoft.KeyVault/vaults
Affected	0

Soft Delete is enabled

Description
All analyzed Key Vaults have Soft Delete configured, ensuring accidental deletions can be reversed.

Recommended action
Continue enforcing Soft Delete across all environments.

Affected resources and observed properties
No affected resource detected for this control.

24. CHECK-AZ-LOG-001 - Log Analytics Workspaces are deployed

Check ID	CHECK-AZ-LOG-001
Module	Logs
Severity	INFO
Status	PASSED
Resource type	Microsoft.Operationallnsights/workspaces
Affected	0

Log Analytics Workspaces are deployed

Description
All analyzed subscriptions contain at least one Log Analytics Workspace for centralized log collection.

Recommended action
Ensure that diagnostic settings on your resources are actively pointing to these workspaces.

Affected resources and observed properties
No affected resource detected for this control.

25. CHECK-AZ-NSG-001 - Management ports are securely restricted

Check ID	CHECK-AZ-NSG-001
Module	NSG
Severity	INFO
Status	PASSED
Resource type	Microsoft.Network/networkSecurityGroups
Affected	0

Management ports are securely restricted

Description
No NSGs allow inbound SSH/RDP traffic from the entire Internet.

Recommended action
Maintain strict source IP filtering for administrative ports.

Affected resources and observed properties

No affected resource detected for this control.

26. CHECK-AZ-NSG-002 - Database ports are not publicly exposed via NSG

Check ID	CHECK-AZ-NSG-002
Module	NSG
Severity	INFO
Status	PASSED
Resource type	Microsoft.Network/networkSecurityGroups
Affected	0

Database ports are not publicly exposed via NSG

Description

No NSGs were found exposing common database ports to the open Internet.

Recommended action

Continue using private networking strategies for databases.

Affected resources and observed properties

No affected resource detected for this control.

27. CHECK-AZ-STG-007 - No analyzed storage accounts were found with local users enabled

Check ID	CHECK-AZ-STG-007
Module	Storage
Severity	INFO
Status	PASSED
Resource type	Microsoft.Storage/storageAccounts
Affected	0

No analyzed storage accounts were found with local users enabled

Description

Analyzed storage accounts do not expose local-user-based authentication as an active finding.

Recommended action

Continue minimizing local authentication paths for storage services.

Affected resources and observed properties

No affected resource detected for this control.

28. CHECK-AZ-VMS-002 - Virtual Machine disks utilize encryption

Check ID	CHECK-AZ-VMS-002
Module	Virtual Machines
Severity	INFO
Status	PASSED
Resource type	Microsoft.Compute/virtualMachines
Affected	0

Virtual Machine disks utilize encryption

Description

No analyzed VMs were found with explicitly disabled disk encryption.

Recommended action

Maintain encryption-at-rest policies for all newly provisioned VM disks.

Affected resources and observed properties

No affected resource detected for this control.

29. CHECK-AZ-VMS-005 - Linux password authentication is disabled

Check ID	CHECK-AZ-VMS-005
Module	Virtual Machines
Severity	INFO
Status	PASSED
Resource type	Microsoft.Compute/virtualMachines
Affected	0

Linux password authentication is disabled

Description

No analyzed Linux VMs were found with password authentication enabled.

Recommended action

Continue enforcing SSH key pairs or Entra ID login for Linux environments.

Affected resources and observed properties

No affected resource detected for this control.

4. Methodology and interpretation

- Execution status SUCCESS means that the scanner module ran successfully; it does not mean that the module is compliant.
- Security posture PASS means no blocking failed control was detected for the module.
- Security posture FAIL means at least one failed control was detected; WARN means no failed control but at least one warning control was detected.
- Severity counters always include CRITICAL, HIGH, MEDIUM, LOW, INFO and UNKNOWN, even when the value is zero.
- The global score is a decision-support indicator based on failed and warning findings. It does not replace a formal risk acceptance process.
- After remediation, rerun Bevoac to verify that failed controls have moved to PASSED.
- The PDF is a finding/remediation/evidence report. Complete raw evidence remains available in the scan JSON API result.
